/Patricia Bianco/ Supervisory Patent Examiner, Art Unit 3772	/Nihir Patel/ Examiner, Art Unit 3772		

The applicant argues that Lubeck does not teach a valve flap having a curvature from a first end to a second end when not attached to the valve body or the face mask. The examiner disagrees with the applicant's argument. Lubeck does teach a valpe having a curvature from a first end to a second end when not attached to the valve body or the face mask. Figure 1 of the Lubeck reference shows a valve flap having a curvature from a first end to a second end when not attached to the valve body or the face mask (the spots where reference characters 1 and 24 are pointing at define a curvature from the first end 24 to a second end 1). The applicant further argues that Lubeck does not describe a unidirectional valve where at least a portion of the curvature of the valve flap is at least partially flattened when the valve flap seals the valve opening. First the valve of Lubeck is unidirectional as stated on page 2 (These valve closure bodies are not under tension whatsoever for closed valves and open in any direction indicating unidirectional. Figure 5 shows that at least a portion of the curvature of the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially flatteneed when the valve flap is at least partially
